

Surf, Sand, and TRASH?

A'ole (No) Marine Debris!

Marine Debris is showing up everywhere:

WRAPPED around the necks
of our ocean friends

TANGLED in fishing lines,
nets, and plastic bags

DAMAGING coral reefs

INSIDE fishes and other
animals

How long do
plastics last?

Hundreds of years.
They only break
down into smaller
parts.

Don't Risk It!

Littering can result in a \$500 fine and punishment. Anyone releasing pollutants (like oil, garbage, synthetic chemicals, etc.) into coastal waters can be fined up to \$25,000.

Setting nets? Be sure you don't damage coral and leave nets in the water or at night for more than 4 hours. That is against the law and not pono!

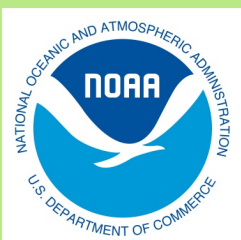

Smart Shopping!

YOU CAN HELP

REPLACE single-use plastic (like water bottles) with **REUSABLE** containers, bottles, and bags.

RECYCLE - Use your imagination! Common items like old T-shirts can be **RE-MADE** into shopping bags.
